

Outstanding Mobile Coverage anywhere in your building

Cellnex can now offer the ideal solution to meet all your in-building coverage needs **while minimising the cost and disruption** of system installation.

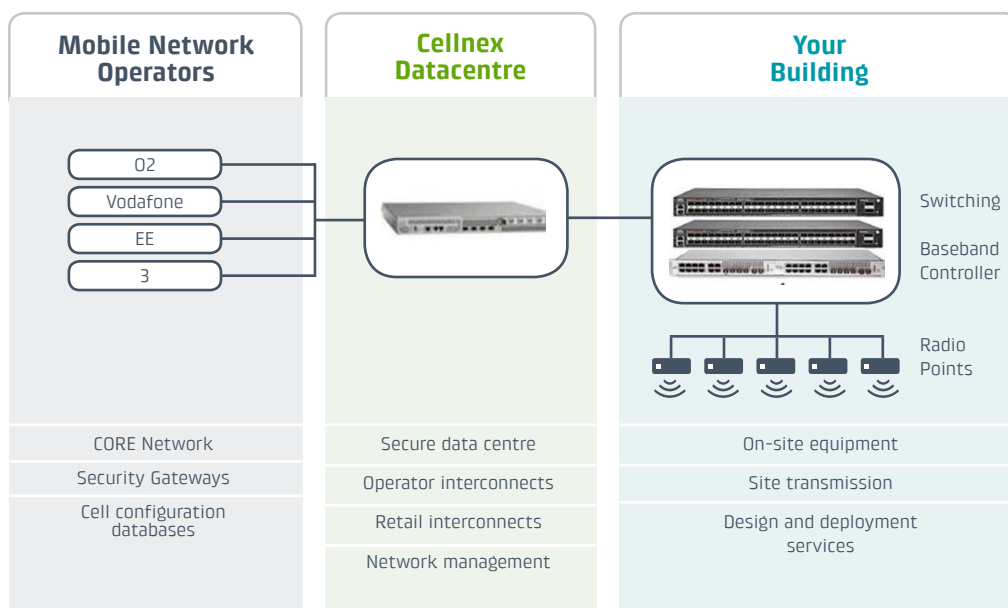

In accordance with the **JOTS guidelines** (Joint Operator Technical Specification), the well-established industry standard for indoor mobile coverage deployment in the UK, we present a single point of connection for all Mobile Network Operators (MNOs), providing full mobile coverage anywhere on the premises.

While off-air repeaters are a convenient solution for smaller buildings, they don't often meet the capacity requirements for larger buildings. Traditional DAS systems are not always commercially viable except for the busiest of public venues. Technology has evolved, and so has our approach. Designed to be completely tailored and fully scalable to suit the nature of your building, our solution has already been successfully deployed in the UK. Cellnex is now introducing it elsewhere in Europe.

Delivery: Quick to deploy in 2-3 months

With less equipment at your premises, and a single connection to our data centre facility, the whole installation is simplified. Cellnex deploys the whole project as the single point of contact.

Flexibility is at the heart of the solution. Not only is the system tailorable to your needs, we offer full commercial flexibility to suit your business.

Our Neutral Host In-Building Solution

Cellnex makes it easier than ever to deploy full indoor coverage for your building:

- Ensures seamless voice and data communications, eliminating dropped calls and slow mobile internet.
- Single interconnection point for the MNOs: requires less space in your building.
- Reduced timescales: usually deployed within 2-3 months from start to finish.
- Highly scalable solution.
- Supports 4G and 5G.
- Eliminates the cost, power and complexity of multiple base stations collocated at your site.
- Cellnex offers a wide range of flexible commercial models to suit your business.
- Discreet and modern: minimum visual impact in your building.

The Cellnex Approach

What makes us unique

- **Multi-operator solution**
Able to connect any mobile operator to your building.
- **Total Flexibility**
Commercial models to suit your business; scalable to suit your changing needs.
- **Fully managed service**
End-to-end solution fully supported over its whole life.
