

Equipment Inspection Service

Simplifying inspection
for equipment at height

Know your equipment mounted on our masts and towers is in good condition.

Recognising the challenges of managing and maintaining equipment at height, our Inspection Service takes the pain away – saving you time and money by offering a simple way to meet your inspection requirements.

As your site provider, we already inspect our own infrastructure on a regular basis to ensure our structures are safe and in good working order. During these visits, we can do the same for you.

During these visits, we can do the same for you – identifying and reporting physical defects, faults and other issues impacting your equipment. Not only does this provide you with early visibility of potential problems, as part of these multidisciplinary inspections our engineers can fix many minor issues on site without the requirement for your teams to revisit later.

“

By taking care of inspections at height, you can rest assured that your equipment is safe, minor problems are addressed and all issues are reported in a timely and accurate manner.

”

Case Study

With proactive maintenance and fast problem solving crucial to containing costs and meeting survey needs, Cellnex UK is working with one of the UK's leading providers of mission-critical communications to make it happen.

As well as helping ensure telecoms equipment remains safe and fault-free across its national network of sites, our Inspection Service eliminates the financial and logistical burden of deploying engineers into the field, managing site access requirements and completing minor repairs.

Plus, with a comprehensive quarterly report detailing completed and planned visits, inspection frequencies of all antenna sites, and action taken/required, the telecoms provider has a simple way to manage risk and assure compliance across its network.

Stats & Facts

9,000
active sites across the UK regularly inspected

50-point
check completed as part of the comprehensive inspection

Annual reporting
or a frequency to meet your needs

Features & Benefits

Multidisciplinary inspections – comprehensive checks on antenna, mounting accessories and feeders for physical and electrical faults, including RF hazards and antenna orientation

Proactive maintenance – minor faults are fixed onsite to avoid repeat visits, with larger faults identified and reported back to customers

Accredited inspectors – appropriately qualified engineers with climbing accreditations

Seamless site access – no requirement for customers to manage site access permissions

Flexible inspection schedules – choose annual, bi-annual or more regular inspections to meet your needs

Operational excellence – scheduled inspections ensure telecoms equipment remains safe and operational
